SKILLS

LANGUAGES

- Scala • Python • Java • Elixir • Kotlin
- TypeScript • Dart • Bash • Go
- C++ • C • Swift • Lua

FRAMEWORKS

- Kubernetes • Play • Akka • FastAPI
- Spring • Django • Flask • Express
- Ktor • Phoenix • Falcon

DATABASES

- PostgreSQL • MySQL • Neo4j • Mongo
- Cassandra • Elasticsearch • Opensearch

TOOLS

- Terraform • Docker • Kubect1 • Lens
- KOPS • SOPS • CloudFormation •
- Prometheus • Grafana • AlertManager
- Splunk • Uv • Sbt • Maven • Nginx

MESSAGE BROKERS

- Kafka • PubSub • SQS • RabbitMQ

CI/CD

- CircleCI • ArgoCD • Argo Workflows
- GitLab CI • GitHub Actions • Bitbucket Pipelines

CLOUD PROVIDERS

- AWS • GCP • Azure

PROJECTS

FITCENTIVE

SCALA, ELIXIR, FLUTTER, TERRAFORM, KUBERNETES, GCP

Social fitness app aimed at helping you **discover** people with **similar interests**

CLUEIN

FLUTTER

Companion app to help you play the game "Clue". Available on iOS, Android and Web

PRESIDENT AI

SCALA, SWING

Swing GUI application that allows you to play the card game **President**

EDUCATION

UNIVERSITY OF WATERLOO ONTARIO, CANADA

HONOURS COMPUTER SCIENCE

September 2013 - May 2018

Patent: Fraud Detection using Graph DBs

EXPERIENCE

OKTA

SENIOR SOFTWARE ENGINEER, DEVELOPER FOUNDATIONS

May 2024 - Present | Toronto, ON

- **Standardized CI solutions** across the organization by architecting an **extensible step registry** platform that replaced fragmented pipelines across different CI systems with a **unified middleware**
- Led the **zero-downtime migration** of a core authentication service from Falcon to FastAPI by upgrading 100% of the API surface to **increase throughput and concurrency** without customer impact
- Integrated **mandatory malware scanning** into the core release platform, encoding **supply-chain security compliance** into the default delivery path **without compromising developer velocity**
- **Eliminated a 10-day organizational bottleneck** by engineering a self-service artifact promotion model via **build-time middleware**, decentralizing ownership to product teams for immediate execution
- **Pitched & engineered** a full-stack self-service portal (React/FastAPI/Airflow) that collapsed a **multiple day SLO into instant execution**, creating an **extensible framework** now adopted by multiple teams
- Engineered a **policy enforcement engine** to translate high-level security mandates into concrete requirements, migrating the organization to **short-lived GitHub tokens at scale**

IMPROVING, OTTAWA

SENIOR DEVOPS ENGINEER

May 2022 - May 2024 | Toronto, ON

- Architected a **cost-efficient migration** of a 50+ GB/day logging platform from Elasticsearch to OpenSearch, utilizing FluentBit to **reduce compute overhead & licensing costs**
- **Standardized Kubernetes delivery** by implementing ArgoCD GitOps workflows, **increasing deployment transparency and velocity** across all production clusters
- **Unified organizational access control** by engineering OIDC, SAML, and LDAP integrations for internal portals, **fulfilling security mandates** through centralized SSO
- **Decentralized infrastructure management** by designing modular Terraform and Kustomize packages, **enabling teams to self-serve** scalable Azure and AKS resources

BILLIE APP

SENIOR FULL STACK ENGINEER

May 2021 - May 2022 | Toronto, ON

- Engineered **scalable Scala APIs** to govern complex authentication workflows, high-volume data exports, and **real-time booking constraints**
- Developed **high-interaction UI components** in React and React Native, including dynamic floor plans and data-rich schedule views, to **improve user engagement**
- Architected **bidirectional calendar synchronization** with **Google and Microsoft APIs**, ensuring seamless scheduling consistency across external and in-app platforms
- Orchestrated **cloud-native infrastructure** across GCP and Kubernetes, managing Kafka clusters and CI/CD pipelines to ensure **high availability** for core services

ASKUITY INC, A DIVISION OF THE HOME DEPOT

SOFTWARE ENGINEER

July 2019 - May 2021 | Toronto, ON

- Engineered a **burstable data pipeline** on EKS using Kotlin and Elixir, utilizing SQS message brokering to handle high-concurrency workloads
- Architected a metrics microservice that enabled **dynamic, user-generated data widgets**, expanding the platform's custom reporting capabilities
- **Accelerated API performance 10x** by implementing an Akka Streams pre-caching solution for high-traffic endpoints
- Developed multi-stack **REST and GraphQL APIs** in Scala and Elixir to handle core authentication and complex CRUD operations at scale

CAPITAL ONE

SOFTWARE ENGINEER

May 2017 - Dec 2017, May 2018 - Oct 2018 | Toronto, ON

- Developed a **patented algorithm** for real-time **fraud detection** using graph databases, **saving an estimated \$250,000** in its pilot program
- Engineered event-driven insolvency workflows within a **Kafka-based Spring microservice** to streamline complex financial processing
